

Firewall appliance FA 700

The Clavister Firewall Appliance FA 700D is a purpose-built key ready firewall appliance combining high performance and space-efficient design. It is designed for use in small/medium sized enterprises and branch offices. The components in the FA 700D are specially chosen to offer the best possible performance in combination with the award winning Clavister Firewall software license products.

The firewall itself is protected, as it does not utilize any underlying operating system. This means that the danger of the firewall itself being subject to attack is virtually non-existent since there is nothing there to attack. The Firewall Appliance is easy to manage and requires little maintenance which, in combination with the 290 Mbps throughput, adds up to a low cost of ownership and an outstanding price-performance ratio. The FA 700D model is designed for desktop mounting and very easy to install in small spaces.

Software licenses

Order the Clavister Firewall Appliance according to your specific needs by choosing licenses from Clavister's portfolio of software license products:

- Clavister Firewall
- Clavister High availability option
- Clavister VPN gateway

We will pre-install your choice of software in order to deliver a true plug-and-play implementation.
